Hi Helene,

Thanks for catching that. Don't really know what happened.

Please make the following changes:

```
UPDATE Species SET FieldFamily='Annonaceae' WHERE FieldFamily IS NULL AND mnemonic like 'ann%' and idlevel='family';
UPDATE Species SET FieldFamily='Myrtaceae' WHERE FieldFamily IS NULL AND mnemonic like 'myt%' and idlevel='family';
UPDATE Species SET FieldFamily='Lauraceae' WHERE FieldFamily IS NULL AND mnemonic like 'lau%' and idlevel='family';
UPDATE Species SET FieldFamily='Rubiaceae' WHERE FieldFamily IS NULL AND mnemonic like 'rub%' and idlevel='family';
UPDATE Species SET FieldFamily='Nyctaginaceae' WHERE FieldFamily IS NULL AND mnemonic like 'nyc%' and idlevel='family';
UPDATE Species SET FieldFamily='Celastraceae' WHERE FieldFamily IS NULL AND mnemonic like 'cel%' and idlevel='family';
UPDATE Species SET FieldFamily='Malpighiaceae' WHERE FieldFamily IS NULL AND mnemonic like 'mal%' and idlevel='family';
```

Thanks,
Suzanne

Subject: viewtaxonomy IDLevel

Hi Suzanne,

In the 2025-dec4 ViewTaxonomy file, there are 46 rows with IDLevel of family. Of those, 9 have NULL or NA values for FieldFamily and Family (so do not actually seem to be identified to family level)

Helene

P.S. The IDLevel genus and IDLevel none records all look okay.
